Solvent Blue 35

Solvent blue 35 is a kind of plastic transparent solvent dye with CAS No.17354-14-2.

At present, the solvent blue 35 dye is widely used in the coloring of plastics, industrial grease, paint ink, masterbatch and other materials. Some varieties are suitable for chemical fibers, polyester, nylon, acetic acid fibers and other color spinning.

Solvent Blue 35 Specification

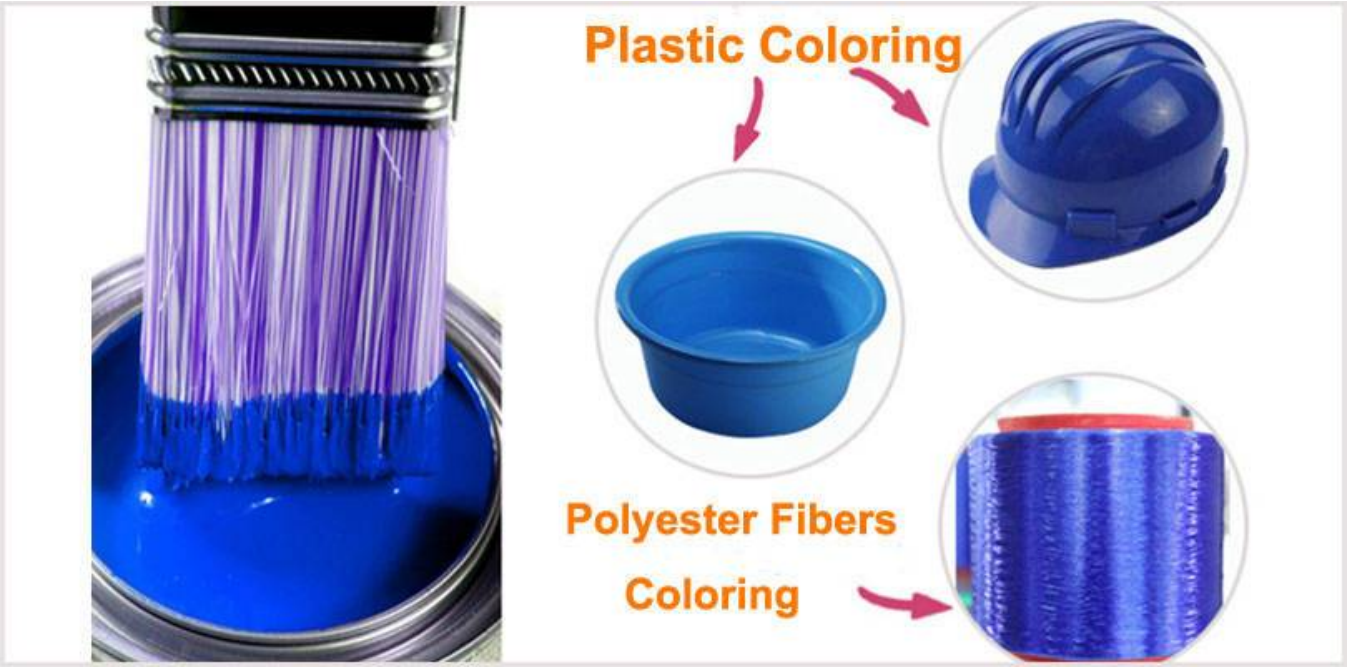
» Solvent Dyes **Name:** Transparent Blue 2N

» **Colour Index:** C.I.Solvent Blue 35(61554)

» **CAS No.:** 17354-14-2

» **Appearance:** Shinning Dark Green Even Fluffy Powder .

» **Usage:** Masterbatch Dyestuffs, Plastic Dyestuffs, Wax Dyestuffs, Polyester Dyestuffs



Solvent Blue 35 Basic Information

Basic Information	
Product Name	Transparent Blue 2N
Colour Index	C.I. Solvent Blue 35
Colour Index No.	61554
CAS No.	17354-14-2
Specification	
Shade	Similar With Standard
Appearance	Uniform Blue Powder .
Density(g/cm3)	1.50
Melting Point(?)	120
Properties	Insoluble in Water, Soluble in Solvent

Solvent Blue 35 Properties

» Bright colour: Bright colour, bright tone, complete chromatogram and high dyeing power.

» Good transparency: The product has good dispersion, high concentration, good color, good transparency, cost effective, and improves the transparency and surface gloss of the product.

» Good heat and light resistance: with excellent heat and light resistance, generally used at low concentration, that can achieve good results, can significantly improve production efficiency.

» Safety and environmental protection: It is made of environmental protection raw materials by special technology. It has the characteristics of environmental protection, pollution-free, non-toxic and odorless.

XCWY is the leading manufacturer of solvent red dyes in China, as well as yellow color, blue color, black color and so on, welcome your inquiry.
